Ring Pessary (thin) 4 Widely used in the treatment of uterine descent and prolapse vaginae and the associated urinary incontinence

- Ring Pessary (thick) Widely used in the treatment of uterine descent and prolapse vaginae and the associated urinary incontinence
  - Supported at a slight vaginal and uterine prolapse 6
  - Sieve Bowl Pessary EF 7 Supported at a slight vaginal and uterine prolapse
  - Urethra Pessary 8 Supports the urethra and improves the sealing function.
    - Urethra Sieve Pessary 9 Provides greater descent at a better maintenance
    - Cerclage Pessary 10 Enables the prevention of cervical insufficiency
  - Cerclage Pessary Hamann & Jorde 11 For prophylaxis and treatment of an emerging premature birth
- For the treatment of stress incontinence and complaints caused by a reduction of the vagina, uterus and bladder
  - Club Pessary 13 For treating large prolapse. Prevented by its stem jamming and slipping
    - Cube Pessary 14 For most forms of genital cutting
- Cube Pessary RV 15 Good adhesion and is easy to use. Can be used with most types of genital cutting. Through the holes, the vacuum is reduced
  - Tandem Cube Pessary
     16

     Suitable for treatment of extreme vaginal and uterine prolapse
     16
    - T Pessary Type B 19 For special treatment of cystocele and rectocele
      - T Pessary Type R 20 For special treatment of cystocele
    - Incontinence Tampon Pessary 22 For special treatment of cystocele and rectocele
      - Pessary Fitting Sets 24

# Ring Pessary (thin)

#### Description

Slight prolapse (descensus) and urinary incontinence (aconuresis) can be successfully treated without surgery. The Ring Pessary has been successfully tried and tested. It is used for treating uterine prolapse (descensus uteri) and vaginal prolapse as well as urinary incontinence (aconurensis). Ring Pessaries are made from medical silicone and are available in various sizes in order to offer each individual patient the best possible comfort.

#### Material

Medical silicone, Silcopure soft Blue

# **Ring Pessary (thick)**

#### Description

Slight prolapse (descensus) and urinary incontinence (aconuresis) can be successfully treated without surgery. The Ring Pessary has been successfully tried and tested. It is used for treating uterine prolapse (descensus uteri) and vaginal prolapse as well as urinary incontinence (aconurensis). The larger circumference of the ring increases the contact area and therefore minimizes the risk of pressure sores (pressure necrosis). Ring Pessaries are made from medical silicone and are available in various sizes in order to offer each individual patient the best possible comfort.

## Sieve Bowl Pessary

#### Description

medesign's Sieve Bowl Pessary helps with slight vaginal and/or uterine prolapse. It is easy to use. The soft medical silicone makes it easily foldable and therefore simplifies insertion and removal. Just like the Ring Pessary, it can be easily placed in the right position. It can also be used reversed. medesign's Sieve Bowl Fitting Set helps to determine the correct size of the pessary.

## Sieve Bowl Pessary EF

#### Description

medesign's Sieve Bowl Pessary helps with slight vaginal and/or uterine prolapse. It is easy to use. The soft medical silicone makes it easily foldable and therefore simplifies insertion and removal. Just like the Ring Pessary, it can be easily placed in the right position. It can also be used reversed. It is more curved and therefore stiffer than the normal Sieve Bowl Pessary.

## **Urethra Pessary**

#### Description

medesign's Urethra Pessary is used successfully in the conventional treatment for urinary incontinence (aconuresis). The Urethra Pessary, a flexible silicone ring with a thickening bulge (calvaria), has been successfully tried and tested. The thickening of the upper edge supports the lowered urethra during the increased pressure from the bladder e.g. when coughing, it prevents the opening of the upper urethra.

## **Urethra Bowl Pessary**

#### Description

medesign's Urethra Bowl Pessary is a combination of the Cerclage Pessary with a thickening bulge (calvaria), that is placed directly under the urethra. The thickening of the upper edge supports the lowered urethra during increased pressure from the bladder e.g. when coughing, it prevents the opening of the upper urethra. The robust body provides a stronger support than the normal Urethra Pessary at severe descensus. The larger contact area significantly minimizes the pressure on the tissue. It is recommended to remove the Urethra Bowl Pessary at night.

## **Cerclage Pessary**

#### Description

Cerclage Pessaries are used to treat pregnant women with cervical insufficiency and therefore preventing late abortion or premature delivery. This riskless therapy is an alternative to surgical intervention. Both methods show a success rate of 80–90 %. Cerclage pessaries can be securely placed thanks to their bowl shape and curvature heights of 17, 21, 25 and 30 mm. Cerclage Pessaries are inserted by an gynecologist depending on the diagnostic findings after approximately week 16.

## Cerclage Pessary Hamann & Jorde

#### Description

Cerclage Pessaries are used to treat pregnant women with cervical insufficiency and therefore prevent late abortion or premature delivery. This riskless therapy is an alternative to surgical intervention. The Cerclage & Support Pessary, patented by Dr Hamann and Dr Jorde, is used for prophylaxis and therapy of possible premature delivery. In the case of cervical insufficiency the Cerclage & Support Pessary takes the pressure off the cervix by supporting it, avoiding the risk of a cervical cerclage procedure.

## **Cramer Pessary**

#### Description

Cramer pessaries are designed for treating stress incontinence (involuntary leakage of urine) as well as conditions caused by descent of the vagina, uterus or bladder. The two thickenings on the upper edge of the pessary elevate the bladder neck, which prevent involuntary leakage of urine when the abdominal pressure is increased during movements such as e.g. coughing. A precondition to being allowed to use a Cramer Pessary is that no vaginal operation, that includes a vaginoplasty, has been performed, because the pelvic floor has a limited sustainability.

## **Club Pessary**

#### Description

The Club Pessary is made from special medical silicone and is successfully used in treating patients with severe prolapses. The shaft prevents the ring from tilting and slipping. After about three weeks it is recommended that a smaller Club Pessary is inserted as the lower vaginal tissue shrinks relatively fast. Often the pessary can be replaced by a Cube Pessary after a couple of weeks. Insertion and removal of the Club Pessary is more difficult than with other pessaries.

## T Pessary Type B

#### Description

Pelvic floor defects in women are often a combination of cystocele, enterocele and rectocele. A cystocele occurs when the very thin wall between the bladder and vagina has become too weak, and the bladder partially sinks into the vagina. Thus a complete emptying of the bladder is no longer possible.

Especially during physical activity, such as heavy work or sport. The T Pessary supports the bladder and bowel in the anatomically correct position.

## Incontinence Tampon Pessary Type C

## The light silicone foam pessary

Female incontinence is a serious and disturbing problem for many women worldwide. The simplest therapy is to wear a supporting Incontinence Tampon Pessary which raises the front vaginal septum and reconstructs normal female anatomy.

The innovative medesign Incontinence Tampon Pessaries are manufactured from medical grade silicone foam. They can be used without any special preparation and have a high tensioning force which remains constant over the whole time of use – for the minimum of 3 months. The mainly closed pores of the foam and the hygienic properties of silicone allow easy cleaning and, if necessary, even disinfection.

Incontinence Tampon Pessaries are available in five sizes to fit the individual female anatomy. This optimal support restores continence in daily life.

As a medical device, Incontinence Tampon Pessaries are manufactured according to the medical device requirements and can be ordered directly from us.

es			

Involuntary loss of urine is a plight of many women. The cause is often a lack of pelvic floor muscles and / or a cystocele. The urine loss caused by sudden pressure on the bladder, such as sports, lifting, sneezing or laughing.

The Incontinence Tampon Pessary Type C provides a simple solution of the incontinence problem. By raising the anterior vaginal wall, the bladder neck is supported and mechanically repositioned so that the normal function of the bladder closure is restored in a natural way, thus preventing the unwanted urine leakage.

If properly adjusted, bladder emptying is not affected by the pessary. The vaginal secretion is retained and the normal vaginal flora is not impaired.

Medesign fitting sets allow a individual adjustment of the pessary size in the doctor's office and contain 4 different sizes. They are made from medical grade silicone and are biologically tested. The fitting sets are made of sterilizable silicone and can be used on multiple patients. A detailed reprocessing instruction is enclosed.

## Pessaries

## For an effective treatment of pelvic organ prolapse (descensus) and incontinence

Pessaries are used for treating pelvic organ prolapse (descensus) and urinary incontinence. Gone is their reputation of causing infections, ulceration and pungent vaginal discharge. The old method of treatment has returned with the use of modern, more pleasant types of pessaries, which are made from a new kind of silicone, especially developed for pessary therapy.

This therapy is returning not least because of the long-term results of surgical treatments for descensus and incontinence, which are far from the operating surgeons' expectations.

For treating descensus and urinary incontinence, various pessary types have proven successful: The Urethra Pessary, the Cube Pessary, the Ring Pessary and the Sieve Bowl Pessary.

The Ring Pessary is used for treating descensus and stress incontinence or softening of scars (e.g. after plastic surgery of the vaginal wall), as well as for preparation prior to descensus surgery.

The Cube Pessary is used for treating uterine prolapse, descensus without urinary incontinence, a cystocele or

scars.

rectocele as well as a softening of scars.

The Urethra Pessary is placed on the medial parts of the levator ani. With this pessary descensus is

repositioned while the proximal urethra is moved ventrally and upwards, significantly improving pressure. However, if the levator ani is loose and insufficient, the Ring Pessary will not stay in place. In this case a women with stress incontinence should use the Cube Pessary.

This type of pessary works using a different principle, as cube pessaries adhere to the vaginal wall like suction cups, thereby being stabilised. Cube pessaries replace all other 'special constructions' of bygone days and effectively treat genital descensus and prolapse (with insufficient levator ani).

## More than 20 years of experience of development and production of pessaries are our foundation for high and economic quality.

Uterine prolapse (Descensus uteri) is often caused by obstetric lesions or genetic weakness of the connective tissue. Uterine ligaments and pelvic floor muscles lose their ability to support the uterus. As a result, the uterus descends, causing a feeling of pressure and chaffing as well as back pain, ulcers and bleeding. A urethro-, cysto- or rectocele may often occur along with descensus. A urethrocele promotes stress incontinence as, when pushing, the urethra opens up funnel-like. A cystocele can bend the urethra (especially when prolapsed) and can result in micturition problems and urinary retention. A rectocele, consequently, causes defectation problems.

Should the Cube Pessary be used for repositioning a cystocele, occasional stress incontinence may occur. In this case one should switch to a Ring or Sieve Bowl Pessary. All patients with a cystocele, rectocele or descensus uteri and prolapse should be treated with cube pessaries prior to considering surgery.

The smallest adhering cube is chosen and can usually be replaced by an even smaller cube after the first or second month of treatment. After three to five months a permanent repositioning (without an inserted pessary) is achieved in more than 1/3 of cases – making surgery unnecessary. However, if satisfactory treatment of the condition and permanent repositioning is not achieved, despite bladder- and pelvic floor exercise as well as local oestrogen therapy, surgery cannot be avoided.

All patients with a cystocele, rectocele and uterusdescensus or -prolapse should only be treated with cube pessaries before surgery is considered.

Life-long pessary therapy is certainly possible. Patients remove the Cube Pessary at night and insert it again in the morning, using Ladysoft lubricant. This assures hygiene as well as relief from strain on the tissue.

»Passion for detail often makes the difference in pessary therapy.«

With kind regards

lothar engel

# **Complementary Products**

### Ladysoft Lubricant

Balances natural moistness of the vagina in a pleasant way and makes intercourse enjoyable. Experienced gynecologists recommend Ladysoft to their patients as lubricant, it's fat-free and can be that can be used safely over a long period. It does not interfere with the endocrine and is kind to the skin, as it is not like other fat-containing lotions and will not adhere to the mucosa or cause skin irritation.

All medesign pessaries are delivered in a user-friendly set.

- 1 medesign pessary
- 1 Ladysoft lubricant
- 1 Instructions for use

### Made in Germany

All pessaries are manufactured in our production facility – providing a solid basis for consistent high quality and innovation.

## **Complementary Products**

### **Femsoft Intimate Washing Lotion**

Especially developed for daily care of the genital area. The low pH-value of 3.8 - 4.0 naturally prevents growth of bacteria.

Natural substances and herbal extracts strengthen the flora of the genital area. Should be gently rubbed in for about 2 to 3 minutes for the wash to be effective. Suitable for daily care.

### **Femsoft Intimate Care Lotion**

Femsoft Intimate Lotion nourishes the skin and protects its natural acid mantle. The natural balance of the delicate skin in the intimate area is protected and feels soft and velvety. Even itching of the anal- or vaginal area can be soothed. This product is also recommended when physically very active. Recommended by gynaecologists and proctologists. Massage a small amount of Femsoft Intimate Lotion into the dry and clean skin of the entire intimate area and a protective moisturizing film will be formed.

### Femsoft Intimate Care Cream

Femsoft Intimate Cream protects the intimate area when especially stressed. It alleviates discomfort and regenerates and balances vaginal flora. Furthermore, it protects against infections. The properties of Femsoft Intimate Cream protects the skin by forming a protective film and thereby smoothing and calming the wounded, stressed skin. By concealing skin injuries, bacteria and fungus cannot grow. The sequence of contamination, washing and irritation is interrupted.

### **Femcon Plus Vaginal Cones**

Active training of the pelvic floor muscles with Femcon Plus Vaginal cones can effectively cure apparent stress incontinence.

Femcon Plus consists of a set of five tampon-like vaginal cones which ascend in weight. After insertion into the vagina they have to be held in place by contracting the pelvic floor. A nylon string ensures easy removal after training.

## Service

### Short delivery times

We have all pessary types and sizes in stock. Orders, that reach us by 12.00 a.m. (midday) are shipped on the same day as parcel post.

### **Expert service**

We will advise you by phone, email or through our contact form on the website.

### Further information - www.pessartherapie.de

You may sign up on our pessary info page to be included in our data bank for physicians.

### **Own development and construction**

All moulds for our pessaries are developed and produced by medesign. The process of manufacture is adapted specifically for the specially developed medical silicone.

### Webstore - www.medesign.de

You have the possibility to shop in our webstore comfortabley at home. Aside from pessaries, you can find a whole range of products from different categories.
